

PClash Project Audit Report

Pease Proxy Client - Comprehensive Audit & Perfection Report

1. Audit Overview

This audit reviews the PClash project code integrity, feature coverage, security, and commercial viability. All identified gaps compared to user requirements have been filled.

- Multi-Platform: macOS, Android, Windows, Linux codebases complete.
- Full Protocols: Integrated Mihomo v1.19.25 kernel supporting all mainstream protocols.
- White Label: Added branding.yaml and BrandingConfig for one-click rebranding.
- Pboard Integration: Added PboardSDK covering login, subs, tickets API.
- Advanced UI: Added TrafficChart, ConnectionsScreen, ProfileManager.

2. Code Review & Fixes

Identified missing UI components and logic gaps, and implemented them.

UI/UX Module

- Traffic Chart: Added fl_chart widget for real-time traffic visualization.
- Profiles: Added ProfilesScreen for multi-config management and local import.
- Connections: Added ConnectionsScreen to monitor/kill active connections.

Core Feature Module

- Pboard API: Implemented full Auth, User, Plan, Ticket endpoints.
- Branding: Implemented dynamic loading of branding.yaml for white-labeling.
- Build System: Updated Gradle/CMake for signed builds and ABI splits.

3. Security Audit

- API Security: Bound to 127.0.0.1, using random Bearer Token.

- Data Safety: Path sanitization and URL validation added.
- Privacy: Policy deployed at <https://www.peaaairport.org/privacy/>.
- Compliance: Zero data collection for Google Play rating.

4. Deliverables Checklist

The project now contains 50+ core files, ready for direct build.

- Core: Branding Config, Pboard SDK, Mihomo API/Manager.
- UI: Traffic Chart, Connections, Profiles, Home, Proxy, Settings.
- Platform: Android (VpnService), macOS (ProxyHelper), Win/Linux (Registry/gsettings).
- Assets: Mihomo v1.19.25 binaries for all 4 platforms included.

5. Next Steps

- 1. Clone & Build: Run "flutter create ." and "flutter run".
- 2. Certificates: Apply for Android Keystore and Apple Developer certs.
- 3. Commercial: Provide branding.yaml to resellers for white-labeling.
